Web Dev.
Lab#1

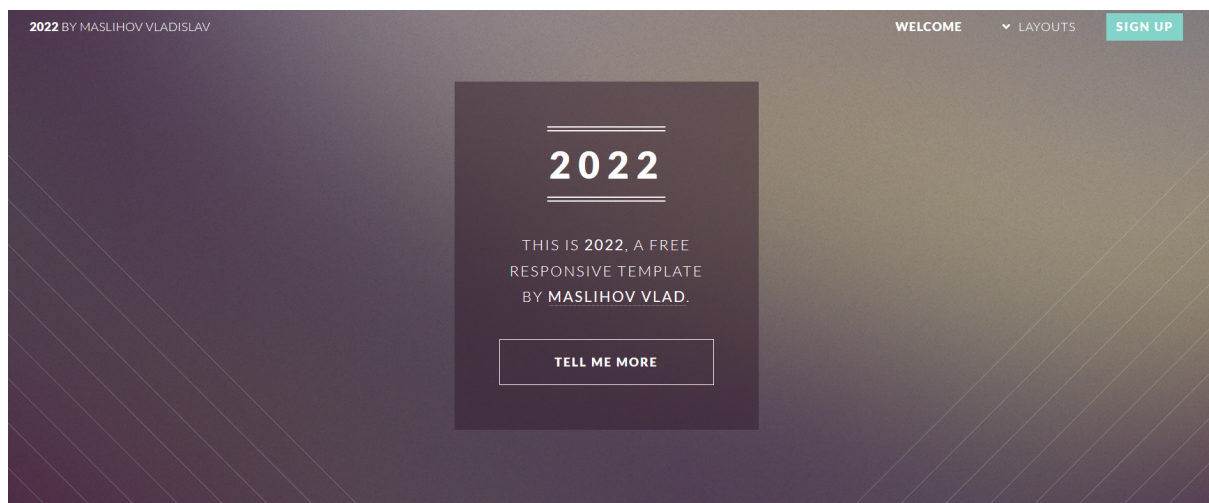

I must say right away - I am not a web developer and have never written anything in HTML/CSS and it would be hard for me to learn everything from scratch. So I resorted to the help of my friend, who explained a lot to me and I did it myself, but he also wrote something himself because it's a little higher level. The repository also contains JS files for testing some functions.

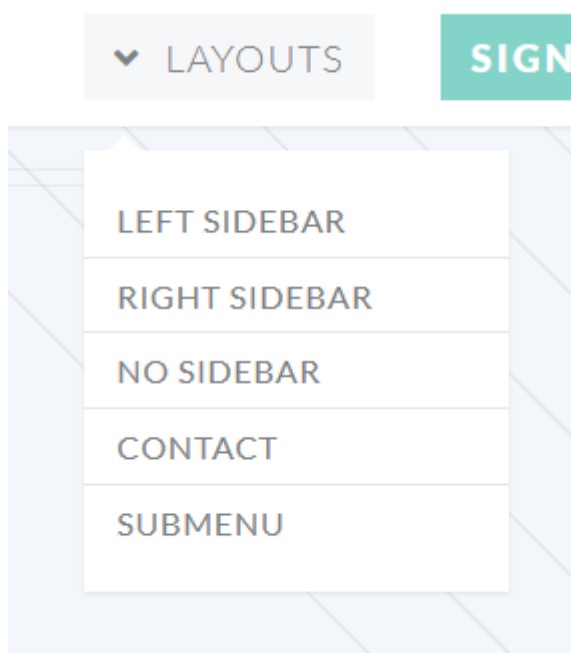

There are also a lot of files that I don't understand, but there was no time to tell me why they were needed. Some of them:

How it looks like

Also there were planned but not done some features like layouts from sides

If it is needed I can try to finish the whole image of this site as it was in our heads.
Some code snippets:

```
<!DOCTYPE HTML>
<!--
  2022 by Maslihov Vladislav
-->
<html>
  <head>
    <title>2022 by Maslihov Vladislav</title>
    <meta charset="utf-8" />
    <meta name="viewport" content="width=device-width, initial-scale=1, user-scalable=no" />
    <link rel="stylesheet" href="assets/css/main.css" />
    <noscript><link rel="stylesheet" href="assets/css/noscript.css" /></noscript>
  </head>
  <body class="index is-preload">
    <div id="page-wrapper">
      <a href="#">Layouts</a>
      <ul>
        <li><a href="left-sidebar.html">Left Sidebar</a></li>
        <li><a href="right-sidebar.html">Right Sidebar</a></li>
        <li><a href="no-sidebar.html">No Sidebar</a></li>
        <li><a href="contact.html">Contact</a></li>
        <li class="submenu">
          <a href="#">Submenu</a>
          <ul>
```

In general, the laboratory work is not finished yet, but since I have been looking for someone who will help for a long time, we have what we have.
I agree with mark 5 if it is possible.
